(57) **ABSTRACT**

A soft window storage unit may comprise a fabric storage roller and a window storage roller mounted to a base or built into a vehicle. A soft fabric may be coupled to and wrapped around the fabric storage roller. A method of storing a soft window of a vehicle may include unrolling a length of fabric from a fabric storage roller and wrapping at least a portion of the length of fabric onto a window storage roller; then wrapping a soft window around the window storage roller while wrapping the fabric around the window storage roller. The method may further include wrapping the soft window between layers of fabric into the window storage roller. The method may further include removing the soft window from storage by wrapping the fabric back onto the fabric storage roller while simultaneously unwrapping the fabric and the soft window from the window storage roller.
